

Responding to COVID-19

Dear Valued Customers and Partners,

For over 26 years the Compass Family of business have been providing geospatial data supporting our clients and communities for their response, recovery and mitigation for natural disasters. You should be confident that **"The Control Freaks"** are on call to support our global community to battle this unprecedented pandemic. With our years of experience working in over 100 countries around the globe, we excel at remote workflows utilizing our established IT systems and processes to guarantee continued operation and support for our products and services. We are monitoring the US Center of Disease Control (CDC) and World Health Organization (WHO) to follow the guidance of government and public health officials to protect our staff, clients and partners we support.

We offer a **Thumbs Up** to the health care professionals, first responders, local communities, governments, transportation and service workers that are the backbone of this response to COVID-19. Our hearts and thoughts go out to the people on the front line and those that have been affected by this virus. Although the duration of this event is uncertain, we do not accept the media term of "The New Normal". With support of government and industry, our health care and emergency management professionals will lead us through this response to limit the impact as we move to recovery. With lessons learned we will all work together to reduce the possibility of such events in the future. Nothing about this event will be normal.

Our staff are working remote and we have put processes in place to support safe operations for data processing, field survey, mobile mapping and drone/POD flight crews. CompassData has over 67,000+ off-the-shelf Ground Control Points (GCPs) to support client photogrammetry production. Under our safe collection protocol, we will continue to collect GCPs, mobile mapping, drone/POD data in support of our clients and global geospatial community for their critical infrastructure. Our global archive of over 700+ authoritative airport orthophotos are available off-the-shelf to support response and recovery efforts.

This war is a fight for our health, global community, and economic future. [CompassData](#) and [CompassDrone](#) are committed to this battle and will support any client, government agency and industry to sustain our global safety, health and well-being. If you have a need or idea on how we can help **TODAY**, contact us and we will provide our products and service **NOW** and figure out future business details as time allows.

Our hearts and business are open, and we look forward to winning this war and a better future ahead. We're in it together. #inittogether
